

Dwyer Engineering Harvey

Dwyer Engineering is an engineering and construction company specialising in steel fabrication. They offer detailing, mechanical and structural fabrication.

Established in 1999, Dwyer Engineering has successfully assisted their clients in mining, power, oil and gas and infrastructure industries throughout Australia. Dwyer Engineering's strength over many years has been their ability to tackle multi-faceted engineering and construction projects all under the one roof. As Dwyer Engineering has grown, so has their capabilities. Their plant, staff and their ability to tackle diverse and multi-faceted projects; all have expanded and increased, meaning that their clients have the assurance and convenience of being able to trust one key supplier with a diverse range of tasks rather than engaging multiple suppliers.

They are equipped with a diverse array of construction and engineering services. These can be provided as a complete solution – a package of services – or as a service-specific offering. This enables the maintenance of fewer supplier relationships for their clients.

Services:

- Detailing
- Fabrication
- Surface Treatment
- Modular Assembly
- Transportation
- Site Installation
- Maintenance

Dedicated to quality:

Dwyer Engineering's strong quality culture ensure that all items that leave our facilities are done right, and installed once in order to maintain our clients quality expectations.
